## Executive Summary

L2.5

### PRISM D1 Level 2.5

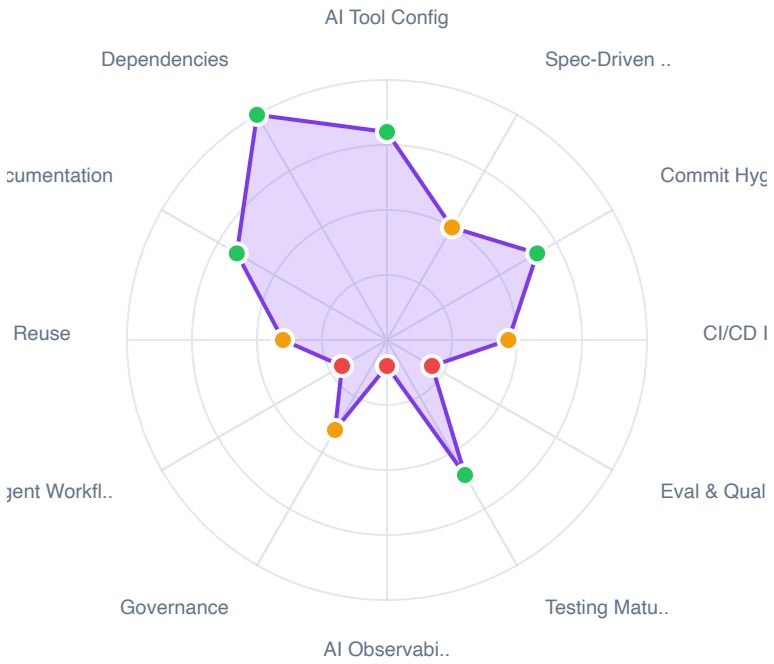
Structured — AI tooling adopted, early measurement

Ready For Pilot

Arcline Health is a Series B startup with 14 engineers, currently assessed at **PRISM D1 Level 2.5** (Structured). The automated scanner scored 48/100 and the SA interview scored 54/100, with an org readiness score of 20/20, producing a blended score of 60.8. The assessment verdict is **Ready For Pilot**, routing Arcline Health to **Track B: Full Workshop**.

| 48 | 54 | 20 |
|---|---|---|
| / 100 | / 100 | / 20 |
| Scanner Score (40%) | Interview Score (40%) | Org Readiness (20%) |

## Scanner Category Breakdown



| CATEGORY | SCORE | PROGRESS | STATUS |
|---|---|---|---|
| AI Tool Config | 8 / 10 | | 80% |
| Spec-Driven Dev | 5 / 10 | | 50% |
| Commit Hygiene | 10 / 15 | | 66% |
| CI/CD Integration | 7 / 15 | | 46% |
| Eval & Quality | 2 / 10 | | 20% |
| Testing Maturity | 6 / 10 | | 60% |
| AI Observability | 1 / 10 | | 10% |
| Governance | 2 / 5 | | 40% |
| Agent Workflows | 1 / 5 | | 20% |
| Platform Reuse | 2 / 5 | | 40% |

| CATEGORY | SCORE | PROGRESS | STATUS |
|---|---|---|---|
| Documentation | 2 / 3 | | 66% |
| Dependencies | 2 / 2 | | 100% |

# Interview Assessment

| SECTION | SCORE | STATUS |
|---|---|---|
| **AI Tooling Landscape**<br>• Claude Code deployed via Bedrock across all 3 squads<br>• CLAUDE.md exists but is inconsistent across repos (2 of 5 repos have it)<br>• Kiro IDE adopted by 8 of 14 developers<br>• Standardized on Claude 3.5 Sonnet for code generation | 11 / 15 | 73% |
| **Development Workflow & Specs**<br>• Feature specs used informally by senior engineers but not mandated<br>• No bug fix or refactor spec templates in use<br>• PRD-to-spec mapping attempted but not systematic<br>• Team lead has drafted a spec template but it is not adopted yet | 10 / 20 | 50% |
| **CI/CD & Quality**<br>• GitHub Actions with lint, test, and build steps<br>• No eval gates -- all PRs go through human review only<br>• Test coverage at 68%, above average for the stage<br>• HIPAA compliance checks in CI are manual | 10 / 20 | 50% |
| **Metrics & Visibility**<br>• Basic GitHub Insights used for commit activity<br>• No AI-specific metrics (acceptance rate, cost, token usage)<br>• Engineering manager tracks velocity in Jira but not AI contribution<br>• No executive dashboard or readout process | 4 / 15 | 26% |
| **Governance & Security**<br>• HIPAA-aware: team avoids sending PHI to AI tools<br>• No formal AI governance policy documented<br>• Data handling guidelines exist for prod but not for AI tools<br>• Security team has reviewed Bedrock data residency | 7 / 15 | 46% |
| **Org & Culture**<br>• VP Engineering is the executive sponsor, actively engaged<br>• Dedicated AI champion (senior engineer) driving adoption<br>• All 3 squads have at least one AI-enthusiastic member<br>• Team ran an internal AI hackathon last quarter | 12 / 15 | 80% |

## Organizational Readiness

✓ Executive Sponsor Identified ✓ Dedicated AI Champion ✓ Team Willingness ✓ Budget Approved ✓ Timeline Commitment

Org readiness score: **20/20**

## Top Strengths

1. **Dependencies**: 2/2 (100%)
2. **AI Tool Config**: 8/10 (80%)
3. **Commit Hygiene**: 10/15 (66%)

## Gap Analysis & Remediation

| PRIORITY | CATEGORY | SCORE | RECOMMENDED ACTION |
|---|---|---|---|
| **#1** | AI Observability (scanner) | 1/10 (10%) | Deploy the EventBridge-Timestream metrics pipeline. Enable token tracking, cost attribution, and latency monitoring. |
| **#2** | Eval & Quality (scanner) | 2/10 (20%) | Define quality rubrics for AI-generated code. Implement automated scoring. Establish minimum acceptance thresholds. |
| **#3** | Agent Workflows (scanner) | 1/5 (20%) | Identify first candidate for multi-step agent workflow. Start with low-risk automation. Document the workflow pattern. |

## Onboarding Recommendation

**Track B: Full Workshop**

### Workshop Modules

| | ID | MODULE | RATIONALE |
|---|---|---|---|
| ✓ | M00 | Environment Setup | Verify and upgrade existing setup |
| ✓ | M01 | CLAUDE.md & Standards | Align existing config to PRISM standards |
| ✓ | M02 | Spec-Driven Development | Formalize and standardize spec workflows |
| ✓ | M03 | CI/CD & Eval Gates | Instrument pipeline with eval gates |
| ✓ | M04 | Metrics & Dashboards | Deploy Timestream + QuickSight dashboards |
| ✓ | M05 | Governance & Scaling | Establish governance model for scaling |

### Success Metrics

| METRIC | TARGET | MEASURE BY |
|---|---|---|
| AI acceptance rate | **30%+** | Week 4 checkpoint |
| Eval gate active in CI | **At least 1 pipeline** | Week 2 of pilot |
| Weekly executive readout | **Active and reviewed** | Week 3 of pilot |
| PRISM D1 level improvement | **+0.5 levels** | Week 8 of pilot |
| Dashboard data freshness | **Within 1 hour** | Week 2 of pilot |

## 90-Day Roadmap

| TIMELINE | MILESTONE | MEASURABLE OUTCOME |
|---|---|---|
| **Week 1** | Bootstrapper fully deployed | All components live, first metrics flowing |
| **Week 2** | Eval gate in CI, dashboards active | PR pipeline includes eval step, QuickSight live |
| **Week 4** | Midpoint checkpoint passed | AI acceptance rate 30%+, exec readout active |
| **Week 6** | Governance model documented | Policy document published to team wiki |
| **Week 8** | Pilot readout delivered | L3.0+ achieved, Track C eligible |
| **Week 12** | 90-day sustained adoption | Metrics stable, no regression below L2.5 |

## SA Engagement Cadence

| WEEK | TYPE | DURATION | AGENDA |
|---|---|---|---|
| **Week -1** | Pre-work kick-off call | 30 min | Review pre-work checklist, confirm AWS access, workshop logistics |
| **Week 0** | Workshop delivery | 4 hr | Deliver all 6 modules, hands-on exercises, bootstrapper deployment |
| **Week 1** | Video call | 45 min | Verify bootstrapper deployment, review first metrics, troubleshoot |
| **Week 2** | Async check-in | 15 min (Slack) | Review dashboard data quality, flag any pipeline issues |
| **Week 4** | Checkpoint call | 1 hr | Midpoint review, acceptance rate check, adjust pilot targets |
| **Week 6** | Async check-in | 15 min (Slack) | Review progress toward 8-week goals, flag risks |
| **Week 8** | Pilot readout call | 1 hr | Final pilot metrics, L3 readiness determination, next steps |
