PRISM D1 Velocity Assessment

AI-Assisted Development Lifecycle Maturity Report

Customer	Vectrix AI	Team Size	28 engineers
Funding Stage	Series C	Assessment Date	2026-04-05
Solutions Architect	Marcus Chen	Repository	`github.com/vectrix-ai/vx-platform`

Executive Summary

L3.5

PRISM D1 Level 3.5

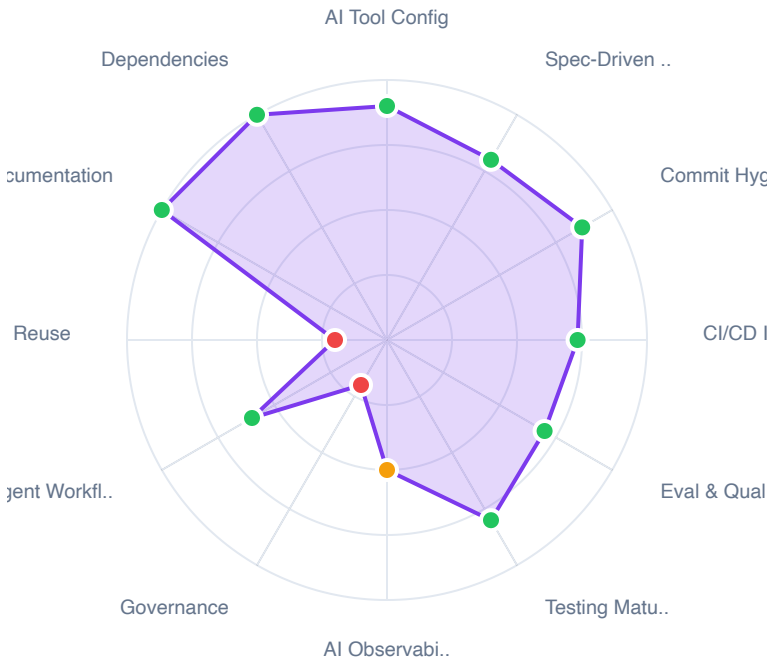
Integrated — Eval gates active, AI embedded in SDLC

Ready For Pilot

Vectrix AI is a Series C startup with 28 engineers, currently assessed at **PRISM D1 Level 3.5** (Integrated). The automated scanner scored 71/100 and the SA interview scored 71/100, with an org readiness score of 20/20, producing a blended score of 76.8. The assessment verdict is **Ready For Pilot**, routing Vectrix AI to **Track C: Accelerated**.

71	71	20
/ 100	/ 100	/ 20
Scanner Score (40%)	Interview Score (40%)	Org Readiness (20%)

Scanner Category Breakdown



CATEGORY	SCORE	PROGRESS	STATUS
AI Tool Config	9 / 10		90%
Spec-Driven Dev	8 / 10		80%
Commit Hygiene	13 / 15		86%
CI/CD Integration	11 / 15		73%
Eval & Quality	7 / 10		70%
Testing Maturity	8 / 10		80%
AI Observability	5 / 10		50%
Governance	1 / 5		20%
Agent Workflows	3 / 5		60%
Platform Reuse	1 / 5		20%

CATEGORY	SCORE	PROGRESS	STATUS
Documentation	3 / 3		100%
Dependencies	2 / 2		100%

Interview Assessment

SECTION	SCORE	STATUS
AI Tooling Landscape	14 / 15	93%
Development Workflow & Specs	16 / 20	80%
CI/CD & Quality	15 / 20	75%
Metrics & Visibility	8 / 15	53%
Governance & Security	5 / 15	33%
Org & Culture	13 / 15	86%

AI Tooling Landscape

- Claude Code deployed via Bedrock across all 5 squads with standardized configuration
- CLAUDE.md in every repository, reviewed quarterly
- Kiro IDE is the default IDE for 24 of 28 engineers
- Custom Claude Code extensions for internal tooling built by platform team

Development Workflow & Specs

- Feature specs mandatory for all new work; enforced via PR template
- Bug fix and refactor specs adopted by 3 of 5 squads
- Spec quality varies -- some are too brief, missing acceptance criteria
- Automated spec-to-PR linking in place via GitHub Actions

CI/CD & Quality

- GitHub Actions with comprehensive lint, test, build, and security scan steps
- Basic eval gate exists but uses threshold of 0 (everything passes)
- Test coverage at 81%, well above average
- Bedrock Evaluation integration started but not yet gating PRs

Metrics & Visibility

- Custom Datadog dashboard tracks commit volumes and deployment frequency
- AI-origin trailer data collected but not visualized
- No AI acceptance rate or cost-per-commit metrics
- Engineering VP reviews velocity metrics weekly but not AI-specific ones

Governance & Security

- SOC 2 compliant: strong data handling for production systems
- AI governance policy is informal and undocumented
- No agent autonomy levels defined -- all engineers have full access
- Security review of AI-generated code relies solely on human PR review
- No cost controls on Bedrock usage

Org & Culture

- CTO leads AI adoption strategy personally
- Two dedicated platform engineers focused on developer tooling
- Monthly internal AI showcase with cross-team presentations
- New hire onboarding includes AI tooling training module

Organizational Readiness

✓ Executive Sponsor Identified ✓ Dedicated AI Champion ✓ Team Willingness ✓ Budget Approved ✓ Timeline Commitment

Org readiness score: **20/20**

Top Strengths

1. **Documentation**: 3/3 (100%)
2. **Dependencies**: 2/2 (100%)
3. **AI Tool Config**: 9/10 (90%)

Gap Analysis & Remediation

PRIORITY	CATEGORY	SCORE	RECOMMENDED ACTION
#1	Governance (scanner)	1/5 (20%)	Create an AI usage governance charter. Define approval workflows for agent autonomy levels. Document data handling policies.
#2	Platform Reuse (scanner)	1/5 (20%)	Audit for reusable AI components. Create a shared prompt library. Establish a pattern catalog for common AI-assisted tasks.
#3	Governance & Security (interview)	5/15 (33%)	Draft an AI governance charter. Address data residency and PII concerns. Define security review requirements for AI-generated code.

Onboarding Recommendation

Track C: Accelerated

Workshop Modules

	ID	MODULE	RATIONALE
✕	M00	Environment Setup	Already have a working setup
✕	M01	CLAUDE.md & Standards	Already adopted standards
✕	M02	Spec-Driven Development	Already practicing spec-driven dev
✓	M03	CI/CD & Eval Gates	Close eval and quality gaps
✓	M04	Metrics & Dashboards	Deploy advanced observability
✓	M05	Governance & Scaling	Formalize governance for scale

Success Metrics

METRIC	TARGET	MEASURE BY
Top-3 gap category scores	**50%+ improvement**	Week 4
PRISM D1 level	**Reach L3.5+**	Week 8
Governance model	**Documented and adopted**	Week 2
Advanced dashboards	**Live with trend data**	Week 4

90-Day Roadmap

TIMELINE	MILESTONE	MEASURABLE OUTCOME
Week 1	Gap remediation started	Top-3 gaps have action plans in progress
Week 2	Advanced dashboards deployed	Custom views live with trend analysis
Week 4	Midpoint checkpoint passed	Top-3 gaps improved 50%+
Week 8	L3.5+ achieved, pilot complete	Re-assessment confirms L3.5+
Week 12	L4 transition ready	Track D architecture review scheduled

SA Engagement Cadence

WEEK	TYPE	DURATION	AGENDA
Week -1	Async prep	15 min (Slack)	Share gap analysis, confirm workshop focus areas
Week 0	Targeted workshop	2 hr	Deliver Modules 03-05 with gap-specific exercises
Week 2	Video call	30 min	Verify gap remediation progress, review dashboards
Week 4	Checkpoint call	45 min	Midpoint review, gap score improvements, adjust plan
Week 8	Pilot readout call	1 hr	Final readout, L3.5+ confirmation, L4 transition plan
